

CITY OF SEATTLE

BICYCLE FACILITY NETWORK

11/30/06

The Bicycle Facility Network is the complete set of bicycle facilities that are recommended in this Plan. Bicycle facilities in the network include facilities for network segments (e.g. bicycle lanes, climbing lanes, shared lane pavement markings, multi-use trails, bicycle boulevards, shared roadways) and facilities for roadway crossings (e.g., full traffic signals, pedestrian crossing signals, curb extensions, median crossing islands, overpasses and underpasses, warning signs). The Signed Bicycle Route System is also a subset of the Bicycle Facility Network. The Bicycle Facility Network represents facilities that will be developed over the next two years as well as longer-term, visionary projects.
